

McKinsey & Co. research indicates the current patient room experience for patients, family and clinicians lacks engagement and patient-centric processes.

An interactive hub in the patient room streamlines medical data access driving better outcomes for clinicians.

Your Interactive Patient Engagement Hub

Replace your whiteboard with a modern interactive information hub capable of communicating care plans, staff assignments, medical records, lab results, imaging and more unifying key patient care components in one solution. Elo's touchscreen products fit any room design and a variety of leading software platforms like Epic Monitor to better engage patients and streamline care.

Automate Intervention Tasks

No one wants to handwrite staff assignment changes or a patient's care plan for the day. Streamline communication and enhance care team productivity with an interactive touchscreen solution.

Enhance Patient Experience

Engage patients within the room and provide physicians with interactive touchscreens for collaboration on diagnosis, care plans, lab results, medications or images.

Enliven Medical Records

Optimize access to patient data and streamline workflows to increase time and attention paid to the provider's most important task - caring for the patient.

Go Virtual with Care

Provide patients access to care team members not available in person, enabling convenient access virtually for specialty consults, saving time and increasing satisfaction. A large HD touchscreen empowers the care team to collaborate efficiently.

Elo Offers Touchscreen Solutions for a Variety of Healthcare Applications -

Ranging from nurse stations, patient education, patient check-in and pharmacy check out.
